MAKING IDEAS REAL AND RELEVANT AMID CONSTANT CHANGE

As the pace of change continues to accelerate, our clients' problem sets are becoming increasingly complex. Delivering effective solutions requires a firm like Booz Allen Hamilton that can connect the right combination of corporate and entrepreneurial resources across an innovation network and possesses the resources, scale, and industry understanding to integrate and iterate on emerging technologies and advancements.

15th and Ideas
THE BOOZ ALLEN INNOVATION CENTER:

THE HEART OF THE INNOVATION HUB NETWORK

Booz Allen has developed a national network of innovation resources that focuses on increasing the flow of relevant ideas, talent, technologies, relationships, and alliances. At the core of this network is the Innovation Center in Washington, DC, which was created to set the conditions for innovation and deliver tailored solutions to meet our clients’ evolving needs. We achieve these goals through a three-pronged process:

• **Ardent Focus on Solutions.** Interdisciplinary teams work side-by-side with our clients, partners, and the innovation community to create integrated solutions. Project teams working in the Innovation Center are provided with customized curricula, mentorships, and cutting-edge technologies. This connects industry-leading products with our world-class consulting services, resulting in better ideas that make significant impacts.

• **A New Way of Working.** Solutions start with people, with this in mind, we designed the Innovation Center as a way to consult differently. It has open spaces to co-locate with clients, wellness-centered design and processes to support staff, and the latest technologies to inspire and excite. The Innovation Center is a working laboratory to test, showcase, and measure how space and technology can promote collaboration, wellness, and productivity, while reducing the time to market for new products and services.

• **Immersive Collaboration.** The Innovation Center features in-person and virtual platforms to connect diverse stakeholders from the larger innovation community to help solve the world’s toughest problems—from creating ethical standards for artificial intelligence to finding new ways to detect lung cancer to inventing the future of transportation.

• **Design.** Whether you’re interested in designing an innovation space, the newest tech breakthrough, or a curriculum to grow a culture of innovation, we can leverage the expertise gained from designing, operating, and evolving the Innovation Center to guide your journey and bring your idea to life.

• **Prototype.** The Innovation Center, enabled by its Solutions Lab, is a breeding ground for new technologies. The space enables developer sandboxes, custom connectivity apps, robots for remote connectivity, and the latest in machine intelligence and mixed reality to enable rapid prototyping that quickly moves to a tangible product.

• **Iterate.** We collect and track data point metrics, use advanced data-visualization techniques, and strive to improve constantly, in order to ensure our processes deliver increasing value for clients and partners.

• **Engage.** The Innovation Center regularly hosts startup weekends, hackathons, and roundtable panels. These events provide opportunities to connect with diverse people in Booz Allen project teams and across the innovation community to accelerate the creation of new solutions.
